NOTE: Unless otherwise specified by your physician, you need to abstain from ejaculation for 2-7 days prior to collection and avoid the use of lubricants.

COMPLETE SEMEN ANALYSIS:

1. Collect specimen directly into the specially provided clean and dry plastic container. Do not collect specimen in a condom (unless a “fertility condom” supplied by a physician) because condoms may contain additives that can affect the analysis.

2. Keep the specimen close to body temperature during transportation.

3. The specimen must be received at the laboratory within 1/2 hour of collection.

POST-VAECTION SPERM CHECK:

1. Collect specimen directly into the specially provided clean and dry plastic container. Condom collected specimens are acceptable.

2. Transport specimen to the laboratory for analysis as soon as possible.
Lab
Collecting Semen Analysis and Sperm Check Samples

PLEASE PROVIDE THE FOLLOWING REQUIRED INFORMATION WHEN SUBMITTING YOUR SAMPLE

Name: ____________________________________________ Date of Birth: __________ Date: ______________________

[PARTN]: Partner’s Name: ____________________________________________

Time collected: ______________ Time received in lab: ______________________________________
